Education

Birla Institute of Technology and Science, Pilani — Hyderabad, Telangana
Bachelor of Engineering in Computer Science - CGPA: ***7.74*** — *October 2022 – July 2026*

Experience

Jupiter Money — Bengaluru, Karnataka
Software Development Engineer I — *July 2026 – Present*

Nielsen — Bengaluru, Karnataka
Software Development Engineering Intern — *January 2026 – June 2026*

- Developed a **Log Ingestion Proxy Service** using **Python**, **OpenTelemetry (OTLP)** and **SigNoz** to collect, process and export application logs, enabling centralized observability and faster debugging.
- Built reusable **React widgets** including Metric Cards, Campaign Cards and Quick Access Toolbars, publishing them through an internal **NPM registry** to improve component reuse across applications.
- Automated widget release workflows by implementing **CI/CD pipelines** for testing, coverage validation, version management and package publishing, significantly reducing manual release effort.

iCIMS — Hyderabad, Telangana
Software Engineering Intern — *May 2025 – July 2025*

- Developed a **Rule Definition Engine** with a form-based UI, reducing task allotment time for candidates by **75%**.
- Implemented frontend using **React** and integrated with a **Spring Boot** backend for rule execution.

Centre for Development of Advanced Computing (C-DAC) — Kolkata, West Bengal
Software Development Engineering Intern — *May 2024 – July 2024*

- Built a **Certificate Management System** supporting issuance, renewal, revocation, and validation.
- Developed frontend with **React** and backend using **Node.js**, **Express.js**, and **MongoDB**.

Projects

IPL Playoff Predictor Backend | *C++, Python, Docker, REST APIs, GitHub Actions* — Mar 2026 – Apr 2026

- Built a high-performance **C++ engine** to compute playoff probabilities using **memoization**, state merging, and H2H-based probabilistic modeling to efficiently simulate large match scenarios.
- Developed a **Python REST API** with automated data refreshes and real-time probability serving.
- Containerized with **Docker** and set up **CI/CD pipelines** for automated builds and updates.

Diabetes Prediction Application | *Python, Scikit-learn, NumPy, Pandas* — Oct 2024 – Nov 2024

- Built ML models using **Naïve Bayes** and **Perceptron** architectures for predicting diabetes using inputs like age, BMI, glucose, and insulin, achieving **97.85%** and **98.36%** accuracy respectively.
- Designed a simple and **customizable** visualization delivered through a **Next.js** frontend.

Technical Skills

Languages: C, C++, Java, Kotlin, Python, Go, Rust, JavaScript, HTML/CSS, SQL, Solidity
Frameworks: Node.js, Express.js, Bootstrap, Tailwind CSS, Next.js, FastAPI
Developer Tools: Git, GitLab, BitBucket, Figma, PostgreSQL, MongoDB, Jupyter Notebook, Docker, Artifactory
Libraries: STL, React, Storybook, Lucide-React, Pandas, NumPy, Matplotlib, TensorFlow, EJS, OpenTelemetry
CI/CD & Tooling: GitHub Actions, CI Pipelines, Automated Testing, Linting, Type Checking, Changesets
Courses: DSA, DBMS, OS, CN, OOP, ToC, ML, AI, DM, System Security, Blockchain

Achievements

Competitive Programming

- **Codeforces: 1783** Rating (**Max 1783, Expert**), **LeetCode: 2109** Rating (Top **1.5%** globally), **CodeChef: 1530** Rating (★ **2**)

ICSC

- Awarded **Silver Honour** in the Final Round of the **International Computer Science Competition (ICSC) 2025** — ranked in the **top 3%** globally.
